One week summer course

June 23 - 27, 2025

BASIC DOSIMETRY AND RADIOBIOLOGY FOR RADIONUCLIDE THERAPY

Explore the fundamentals of dosimetry and radiobiology for targeted radionuclide therapy and learn how to apply them in research and clinical practice. Guided by experts from the Dosimetry Core Unit, you will delve into the effective use of alpha- and beta-emitting radionuclides, gain insights into dose-effect relationships, and translate preclinical findings into clinical applications. This course provides an inspiring foundation for those looking to unlock the full potential of radionuclide therapy.
